Molecular Biology and Pathogenicity of Mycoplasmas - PubMed** Mycoplasma is a genus of bacteria that lack a cell wall around their cell membrane. Without a cell wall, they are unaffected by many common antibiotics such as penicillin or other beta-lactam antibiotics that target cell wall synthesis. They can be parasitic or saprotrophic. **Mycoplasma pneumoniae: an underutilized model for bacterial cell** <http://10.1590/0001-3765201620150164>. Biological Sciences.
