

Defending Constantine: The Twilight of an Empire and the Dawn of Christendom

We know that Constantine issued the Edict of Milan in 313, outlawed paganism and made Christianity the official religion of the Roman Empire. He manipulated the Council of Nicea in 325, exercising absolute authority over the church, co-opting it for the aims of empire. And if Constantine the emperor were not a problem enough, we all know that Constantinianism has been very bad for the church. Or do we know these things? Peter Leithart weighs these claims and finds them wanting. And what's more, in focusing on these historical mirages we have failed to notice the true significance of Constantine and Rome baptized. For beneath the surface of this contested story there emerges a deeper narrative of the end of Roman sacrifice--a tectonic shift in the political theology of an empire--and with far-reaching implications. In this probing and informative book Peter Leithart examines the real Constantine, weighs the charges against Constantinianism, and sets the terms for a new conversation about this pivotal emperor and the Christendom that emerged.
