

Effect Of Mobile Phone Radiation On Antibiotic Sensitivity

Mobile phone radiation exposure for long term is harmful to human beings and other living system. The study was based on the effect of mobile phone radiation on the antibiotic sensitivity in Escherichia Coli. The difference in sensitivity of E.Coli that exposed to mobile phone radiation were studied. The mechanism of resistance of these pathogenic bacteria has to be found out as soon as possible for improved patient care. This study may be repeated with other type of micro organisms, both gram positive and gram negative with other antibiotics for further investigations. This study has found that, such radio frequency radiation exposed E.Coli shows decreased sensitivity than other non radiated E.Coli towards Gentamycin. Anyway this topic helps to take preventive measures to withstand our healthy living system.
