

Fundamental Aspects of the Caring for the Person with Dementia (Fundamental Aspects of Nursing) (Fundamental Aspects of Nursing)

This book begins by asking you to try to imagine the life you have now changing beyond all recognition. One day you wake up and don't know where you are. You ask someone near you where you are but they seem unable to understand your question. Why do they not understand, what is wrong with them? It is hard to contemplate this and to fully comprehend the emotional turmoil caused by the symptoms of a Dementia type illness. This book has been written with the intention of helping its readers to understand the perspective of the person who has been labelled as suffering with dementia, as well as that of the carers and the professionals. It is split into two sections to help the reader identify the parts they need to read at different times or for varying purposes. Section 1 offers information and debate about the theoretical issues and explanations of Dementia and memory loss. This includes explanations of what Dementia actually is and where it comes from in the first place. Section 2 moves into the more practical side of this text. Many areas of concern for carers and professionals alike are similar. This section brings their ideas and perspectives together so that they might be able to benefit from each other. Readership: This book will be suitable for nurses, student nurses and carers alike.
