

Lessons in Music Form: A Manual of Analysis of All the Structural Factors and Designs Employed in Musical Composition (Classic Reprint)

The present manual treats of the structural designs of musical composition, not of the styles or species of music. Read our A fterword. It undertakes the thorough explanation of each design or form, from the smallest to the largest; and such comparison as serves to demonstrate the principle of natural evolution, in the operation of which the entire system originates. This explanation be it well understood is conducted solely with a view to the Analysis of musical works, and is not calculated to prepare the student for the application of form in practical composition. For the exhaustive exposition of the technical apparatus, the student must be referred to my Homophonic Forms. The present aim is to enable the student to recognize and trace the mental process of the composer in executing his task; to define each factor pf the structural design, and its relation to every other factor and to the whole ;to determine thus the synthetic meaning of the work, and thereby to increase not only his own appreciation, interest, and enjoyment of the very real beauties of good music, but also his power to interpret, intelligently and adequately, the works that engage his attention.(Typographical errors above are due to OCR software and dont occur in the book.)About the Publisher Forgotten Books is a publisher of historical writings, such as: Philosophy, Classics, Science, Religion, History, Folklore and Mythology.Forgotten Books Classic Reprint Series utilizes the latest technology to regenerate facsimiles of historically important writings.
