

## The Political Economy of the Living Wage: A Study of Four Cities

This book examines the movement for living wages at the local level and what it tells us about urban politics. Oren M. Levin-Waldman studies the role that living wage campaigns may have had in recent years in altering the political landscape in four cities where they have been adopted: Los Angeles, Detroit, Baltimore, and New Orleans. It is the authors belief that the living wage movements are a result of policy failure at the local level. They are the by-product of the failure to adequately address the changes that were occurring, mainly the changing urban economic base and growing income inequality. The author undertakes a scholarly analysis of the issue through the disciplinary lenses of political science while also employing some of the economists tools.
